

Woodland Pulp owns a natural gas transmission pipeline approximately 5.4 miles in length and located entirely in Baileyville. Yellow line markers are used to help indicate the approximate location of our pipeline.

Our goal at Woodland Pulp is to operate our natural gas pipeline in a safe and reliable manner to ensure the safety of those living and/or working near the pipelines. In the event of a pipeline leak, you may smell a rotten egg-like odor, hear an unusual noise coming from the ground, or see dirt/water blowing. If you notice any of these please leave the area immediately and call 911 and the Woodland Mill.
